To: Anibal <anibalsantosgo@gmail.com>

Hey Anibal,

With the way web development is going nowadays, knowing JavaScript makes a helluva difference. It can mean getting hired into a good development job. It can also mean you finally create that ideal UI/UX for your customers.

Deep inside, you know you need to learn JavaScript.

But don't you feel scared whenever you hear the word "JavaScript"? Don't you feel confused and overwhelmed, maybe even to a point where you lose confidence in yourself?

Where do you start learning? With one of the many frameworks out there like Angular, React and Vue? Or learning "Vanilla JS"? How do you choose what to learn?

Let's say you just got started. But once you got into your framework, you start to get bombarded with weird phrases and acronyms. 'ES6', 'Webpack', 'npm' and even 'Node'.

Isn't 'Node' supposed to be backend JavaScript? What has it got to do with frontend? How do you use it?

How do you begin learning this huge JavaScript monster? How do you make sense of the different technology out there?

You're not alone, Anibal. Many developers, new and experienced, face the same problem – there's so many things to learn, and things change so quickly you can't help but suffocate at the pace.

It's overwhelming, really. This is what people commonly call "JavaScript Fatigue".

But learning JavaScript doesn't have to be so hard!

It can be SUPER FUN! 😺

You can enjoy every moment of it. There's a way to get good quickly, and you'll be building cool stuff from scratch before you know it.

There's a way to go from knowing nothing to becoming a solid frontend developer or even a full-stack developer without ever feeling like an idiot.

You just need to know how.

That's what this JavaScript Roadmap is for, to show you the way, so you can enjoy learning JavaScript and feel confident with wielding its powers in the near future.

Here's what to expect:

There are *seven lessons* in this email course. You'll receive one lesson every two days. They are:

Lesson 1: How to fight fear, overwhelm and confusion JavaScript fatigue
Lesson 2: How to learn JavaScript with rocket speed
Lesson 3: How to learn JavaScript from scratch without any coding experience
Lesson 4: How to master the DOM and start building real things
Lesson 5: How to improve your JavaScript fundamentals
Lesson 6: How to choose JavaScript libraries and frameworks to learn
Lesson 7: How to choose what to learn next on your JavaScript Roadmap.

Each lesson contains a [JSR] prefix in the subject (like this one), so watch out for them 👀.

You won't be able to finish all seven lessons in 14 days. Becoming a JavaScript expert in three weeks without prior programming knowledge is a tall order, even if you possess genius brains like Benjamin Franklin's.

So, don't worry about catching up with the lessons. They're here to show you the way. You're receiving them before you step into the fog of war so you know what happens beyond your current stage. They'll help you quell the psychological fear of not knowing what comes next.

When you read through the lessons, expect to get your hands dirty with code. You need to do the work, or you'd learn nothing otherwise. (If you don't want to code, scroll down and click the unsubscribe link at the bottom of this email to unsubscribe from the course right now).

What to do for today

Get ready to embark on an exciting journey on learning JavaScript. Know that you'd be well supported along the way, you'll receive lots of valuable JavaScript advice and you'll get to read awesome content created by awesome people.

In the next lesson, you'll learn how to tackle the sick feeling of being confused and overwhelmed. These feelings have ruined the lives of many young JavaScripters.

Thou shalt not be another victim.

To prepare yourself for the lesson, think about why you feel overwhelmed and confused when learning JavaScript.

Then, hit reply and let me know why. I read every reply and respond to as many as I can.

- Need 1-1 help? Let me know
- If you no longer wish to receive emails from me, you can unsubscribe anytime.
- If you want to change your name or email address, you can use this link.
- Here's my address if you want to send something over: Blk 427 Serangoon Central #05-310, Singapore, Singapore 550427
